

Wednesday Challenge Form

Group Members: Jaden, Jonathan, Mati,

Problem Statement: We were handed two Masses and both were labeled 1 kg and we had To try and figure out which one was actually 1kg

Approach: First we got the two masses. Our group had exactly three minutes to weigh The two. We got the two weights and had To figure out the ratio of the two weights. We guessed 1 to 3 but later on we figured out That the real ratio was 1 to 4.

Solution: We got 1 to 3 and lossed.

Lessons Learned: Teach the class how to use Scale so you can win.
