

Date:

Wednesday Challenge Form

Group Members: Mason, Tyler, Raul, Myself

Problem Statement: Dr. Neat gave us two Options, to either get the grade you have now in Math, or write every digit 1 to 1 million and get an A

Approach: First we thought of timing ourselves on how many numbers we can write in one minute. Then we multiplied that by 60 to see how much we can write in one hour, there are 180 days in a school year 24 hours times the amount we can write is the total days it would take to write to 1 million

Solution: We figured that it would take way too long and not worth it

Lessons Learned: We learned to take things a little slower
